

Introduction to Robotics 2022 Sem 1

Rules for robot room usage

1. No eating or smoking in the room. Please keep the room clean.
2. Any damage that requires repair must be reported to TA. TA will repair the damage and hand you back the turtlebot as soon as possible.
3. You can contact TA for repairs or technical support at Blackboard's Discussion board.
4. All groups will book 1day every 2 weeks except Sunday. Sunday will be used for repairs or emergency rescheduling should a need occur. During extra days there would be another round of booking for half a day per team.
5. Robot room is open from 8am to 12am (16 hours). This arrangement might change for the final project period.
6. You will be left mostly alone during the time period.
7. You can try out Physical milestone 1-4 or Simulated milestone 1 and 2 on the provided NUC and turtlebot during the booked time.
8. All members should be present when receiving and handing over the turtlebot to the next team. This is kind of a soft-DRM so that we make sure to come and contribute to the team effort. Exceptions must be explained to the professor.
9. If you finish early, you still have to report at the specified time for hand-over. Leave the equipment at the robot room.
10. All equipment must be present during handover. Reference list is provided for your convenience.
11. Professor Lee, TA or other authorized helper will present during all receiving / handover processes to sign off the process.
12. We will do basic inspection for turtlebot damage, missing items and cleanliness of the room during handover. Please clean the room before you leave so that the next group can use the room without delay.
13. Students will be asked to pay for damages or missing items like SD cards. With that said, we will try our best to repair the damages so that the need does not occur.
14. If we run out of spare components, we might have to cancel your bookings for long term repair.

Group No and Name mapping (For SD cards etc.)

Group 1: Docker

Group 2: JH

Group 3: M1 Wrestlers

Group 4: NoX86

Group 5: Robocats

Group 6: SomebodyHelpUs

Group 7: TBD2

Group 8: WafflePi

Group 9: Whale
